# CONTROL AND SECURE YOUR DOCUMENT FLOW WITH KYOCERA NET MANAGER

CONTROL SENSITIVE DOCUMENTS AND REDUCE PRINTING COSTS

KYOCERA Net Manager is a server-based application designed to protect your confidential data, manage the overall document output and related printing costs. Thanks to the Print&Follow™ function embedded in KYOCERA Net Manager, the documents sent to the printer remain in the system and can be securely printed from any device.

KYOCERA Net Manager allows you to control the overall output and get detailed reports on usage. Users can access their account via the web browser and keep an overview of their personal printing jobs. KYOCERA Net Manager greatly simplifies scanning and faxing processes as it automatically displays a set of personalised options according to your most used settings.

BUSINESS CHALLENGES

> The theft of confidential data could potentially harm my business – **How can I make sure no unauthorised person can access my data?**

> Finding the correct settings for scanning & faxing is time-consuming and difficult – **How can I make these processes easier and more efficient?**

> It is hard to track all printing related costs – **How can I monitor these and save money?**

YOUR ADVANTAGES WITH KYOCERA NET MANAGER

> **Authentication:** Printing, copying and scanning starts only after the user has logged in at a selected device, using different authentication methods according to your security requirements.

> **Secure & Easy Scan** offers fast one-click operations that are easy to use. User based scanning profiles will provide easy access to recurring scan workflows at the push of a button.

> **Accounting:** Users can track their printing volumes and managers can better control and reduce printing costs. The tracking of prints alone can help decrease the number of printed pages.

PREPAID PRINTING WITH KYOCERA NET MANAGER

KYOCERA Net Manager offers you the possibility to distribute credit vouchers, which can be used for printing / scanning in public places such as schools and libraries. The users can buy prepaid credits that allow them to print, copy or scan a defined number of documents. These vouchers can be printed on any device by an authorised person.

FEATURES & SPECIFICATIONS

With its well-structured and intuitive interface, KYOCERA Net Manger simplifies all the processes you need to carry out on your MFP. As you will log in before using the device, KYOCERA Net Manager will offer you shortcuts to your most used scanning, faxing and printing settings as well as buttons to quickly choose other options. This reduces the time used to process your documents and at the same time allows you to detect any unusual printing habits in your office. New in KYOCERA Net Manager is also authentication and Print&Follow functionality with KYOCERA printers without the need for additional hardware.

Authentication – Access the devices in one step by PIN, ID-Card or Windows Login or in a two phase authentication combination such as ID-Card and PIN.

Security – Secure printing, data encryption and Print&Follow™ function ensure that your documents can only be accessed and printed by authorised people.

Reporting – KYOCERA Net Manager keeps detailed statistics about the printing costs generated by a project, user or department.

KYOCERA Local Print Spooling – Allowing you to integrate your Branches into a central printing environment where there is no KYOCERA Net Manager server in the local branch office - No print job will be spooled via the central KYOCERA Net Manager server or leave the branch location

Personalised Features – KYOCERA Net Manager allows the display of user or group based interfaces to perform tasks based on the dedicated user requirements.

Scan to Function – One click changes the destination of your scanned documents. You may not only choose between destinations like private or group folders, but also start complex and automated workflows.

Mobile printing – Print documents from your mobile device by simply sending an email to the KYOCERA Net Manager server. Supports KYOCERA Mobile print app for iOS and Android, offering advanced printing and scanning functionalities.

Workflow Automation – Select a predefined process directly from the MFP panel for guaranteed compliance to workflow regulations. The workflow module supports scripting, OCR conversion, Barcode recognition and many connectors to market leading DMS / ERP software like SharePoint, for example.

KYOCERA NET MANAGER WEB INTERFACE

KYOCERA Net Manager Web Interface is a convenient way to manage document output at every level:

> Access via a web browser and a personal KYOCERA Net Manager Login.

> No extra software and tools needed.

> User can manage print jobs.
